

IFPI Learning Platform

Administrator User Guide · Version 1.0 · July 2026

Version 1.0 · July 2026

This guide covers everything an Organization Admin or Instructor needs to run the IFPI Learning Platform: authoring courses (manually and with AI), managing students, billing and pricing, marketing tools, live sessions, analytics, and platform settings.

1. Getting Started

1.1 Logging in

Open the platform URL and sign in with your admin email and password. If your account was just created you may be asked to set a new password on first login. Two-factor authentication (TOTP) can be enabled later under **Settings** → **Security**.

1.2 The Onboarding Board

On your first visit, the dashboard shows a 7-step onboarding checklist with a progress bar:

1. Set your organization colour and logo
2. Create your first course
3. Invite your first learner
4. Configure the certificate signature
5. Connect SMTP for outbound email (optional)
6. Publish your Terms & Conditions
7. First learner activity

Each step has a shortcut button. The board disappears automatically once you reach 100%.

1.3 Branding your academy

Go to **Settings** → **Organization**:

- **Name, description and logo** — shown on the login page, catalog and emails.
- **Primary colour** — applied across the learner UI.
- **Certificate branding** — accent colour, signature text (e.g. "Jane Doe, Director of Education"), signature image, and footer/disclaimer text. Every certificate PDF issued inherits these automatically.

2. The Admin Dashboard

The dashboard is your daily control room:

- **Key metrics** — learners, enrolments, completions, certificates issued.
- **Members Needing Action** — learners who are stalled, past-due on a cohort target, or approaching a deadline, with the reason colour-coded.
- **Engagement tiles** — document/library engagement and recent activity.
- **Onboarding board** (until complete).

The left sidebar gives access to every admin area described below.

3. Courses

3.1 Creating a course manually

Courses → **New Course**. Set the title, description, category, estimated duration, passing score, and price (leave 0 for free). Then open the course editor to add content:

- **Slides** — rich text (headings, lists, images), reorder by drag, multiple slide types.
- **Narration** — optional text-to-speech narration per slide; you can clear or regenerate it at any time.
- **Cover colour / imagery** — for the catalog card.

3.2 Versioning

Every significant edit creates a version snapshot. The version sidebar in the course editor lets you inspect and **restore** any previous version — a confirmation dialog protects you from accidental rollbacks.

3.3 Publishing

A course is invisible to learners until its status is **PUBLISHED**. You can unpublish at any time; existing enrolments keep their progress.

3.4 The Mind Map

Mind Map gives a visual overview of your courses and learning paths. Drag nodes to arrange them; the layout is saved per user and can be cleared.

3.5 Bulk imports (SCORM / xAPI / bulk content)

Imports accepts SCORM packages, xAPI content, and bulk slide imports. Each import can be **rolled back** in one click if the result is not what you expected. xAPI statements from imported content automatically drive completion tracking.

4. The AI Authoring Suite

All AI features draw on your organization's monthly AI budget (configurable; spend alerts fire via webhooks).

4.1 AI Course Builder

From **Courses**, use the AI builder: describe the topic, audience and depth, and the AI drafts a complete course — slides, structure and a quiz. Review, edit and publish. Everything the AI produces is fully editable afterwards.

4.2 AI Quiz Generator

Inside a course, generate quiz questions from the slide content. Questions land in the exam editor where you can adjust wording, options, correct answers and points before publishing.

4.3 Flashcards

Flashcards lets you author spaced-repetition flashcards per course, or generate them with AI. Learners review them with an SM-2 scheduler.

4.4 Deep Research

Research ingests source documents into your organization's knowledge corpus. Ingested sources power semantic search, AI tutor citations and research-assisted authoring.

4.5 AI Tutor (learner-facing)

Learners get an "Ask AI Tutor" panel inside every course. Answers cite your ingested sources. Personally identifiable information in learner questions is **always redacted** before reaching the AI provider. Tutors sessions are org-isolated and archived per learner.

4.6 AI Query Builder

Query Builder turns a plain-English question ("how many learners completed a course this month?") into a safe, read-only SQL query over a curated set of tables and shows the results as a table. Great for ad-hoc questions without waiting for a report.

5. Exams & Assessments

Exams manages assessments per course:

- Question types: multiple choice, true/false.
 - Time limit, passing score, and maximum attempts per learner.
 - Publish/unpublish independently of the course.
 - Passing an exam triggers certificate issuance automatically.
-

6. Managing Students

6.1 Users

Users lists everyone in your organization with role, activity and streak information. Self-registered accounts are always learners; admin elevation is invite-only.

6.2 Invitations

Invitations supports:

- **Single invites** — email a personal join link.
- **Cohort batch invites** — paste a list of emails and tag them with a cohort name. Cohort tags flow into analytics, digests and reports.

If outbound email is stubbed in your environment, you can copy the invite link from the UI and share it manually.

6.3 Cohorts & celebrations

When a cohort crosses your configured completion threshold (default 75%), the platform fires a celebration notification (optionally to a Slack/Discord webhook) and includes the cohort in the Monday digest email.

6.4 Members Needing Action

The dashboard widget and weekly digest both surface learners who need a nudge, with the reason (inactive, failing, deadline approaching). Use it as your Monday-morning to-do list.

7. Learning Paths

Learning Paths chains courses into a sequenced journey (e.g. Foundation → Intermediate → Advanced). Learners see their position on the path and unlock the next step on completion. Paths can be edited or deleted at any time.

8. Live Sessions

Live Sessions manages instructor-led events:

- **Create a session** — title, time, meeting URL (any provider), linked course, capacity.
- **Recurring series** — weekly/monthly rules with exception dates; learners can RSVP to one occurrence or the whole series.
- **RSVP tracking** — see who's coming; learners who RSVP to a session of a course they aren't enrolled in are **auto-enrolled**.
- **Attendance** — mark attendance in the session modal (bulk mark supported). Attendance can automatically issue attendance certificates and send confirmation emails.
- **Calendar feeds** — learners subscribe via a personal ICS URL; you can rotate the URL secret org-wide if a link leaks.
- **Reminders** — automatic email reminders before each session.

9. Certificates

9.1 Issuance & branding

Certificates are issued automatically on exam pass or attendance. PDFs carry your organization's branding (Section 1.3).

9.2 Public verification & sharing

Every certificate has a public verify link (QR code included on the PDF) and a share page optimized for LinkedIn/Twitter previews — learners can brag, employers can verify.

9.3 Revocation

Admins can revoke any certificate with a reason. Revoked certificates:

- fail public verification with the reason shown,
- return "410 Gone" if the learner tries to download the PDF,
- display a REVOKED banner on the share page and preview image.

Revocation can be undone. Every revoke/unrevoke is written to an **audit trail** viewable per certificate.

9.4 Bulk operations

Admin → **Certificates** provides a searchable, filterable table with multi-select **bulk revoke**, a per-certificate revocation-history drawer, and a **CSV export** for auditors.

10. Gamification

- **Points (XP)** — learners earn points for activity.

- **Badge tiers** — configure your own tiers under **Badge Tiers** (name, threshold, icon); learners level up automatically.
 - **Streaks** — daily learning streaks with automatic "streak about to break" nudge emails and a weekly streak leaderboard digest to staff.
 - **Leaderboard** — org-wide ranking visible to learners.
-

11. Billing, Pricing & Payments

11.1 Setting prices

Set a price on any course (in cents, ZAR by default). Free courses enrol instantly; priced courses route through checkout.

11.2 Payment providers

The platform supports a per-organization billing mode:

- **Native Stripe** — card checkout. In test environments Stripe runs in test mode (use card 4242 4242 4242 4242 — no real charges).
- **ERP360 billing bridge** — for organizations bolted onto ERP360's billing gateway (debit orders / lite-billing subscriptions).

11.3 Entitlements

Access is governed by an entitlement layer, not by the payment provider — so switching providers never breaks existing learners' access. The **Entitlements Inspector** shows exactly why a learner does or doesn't have access to a course (paid, comp role, free course, etc.).

12. Marketing Tools

12.1 Public catalog & SEO

Published courses appear on your public catalog page with SEO-friendly URLs, a sitemap and social-preview cards — indexable by search engines out of the box.

12.2 Marketplace

Opt your organization into the cross-tenant **Marketplace** to have your published courses discoverable by other academies' learners. **Marketplace Analytics** shows views, clicks and conversion by course.

12.3 Affiliate / referral program

Affiliate lets you create referral codes (custom reward percentage, expiry, notes). Copy the referral link, distribute it, and track referrals and pending vs credited earnings. Payouts are marked credited by a super admin. Self-referrals are automatically blocked.

12.4 Share & brag cards

Certificates and courses generate branded share pages with rich previews for LinkedIn/Twitter — free word-of-mouth from every graduate.

13. Reports & Analytics

- **Reports** — enrolment, completion and certificate reporting with CSV export (cohort CSV includes per-learner progress).
 - **Course funnel** — view → enrol → start → complete conversion per course.
 - **Slide drop-off** — see exactly which slide loses learners.
 - **Scheduled Reports** — subscribe yourself (or any recipients) to daily/ weekly/monthly emails of four report kinds: members needing action, cohort progress, certificate issuance, enrolment summary. Run any report immediately with "Run Now".
 - **Query Builder** — ad-hoc natural-language questions (Section 4.6).
 - **Audit Log** — every significant admin action, searchable.
-

14. Communications

- **Email Diagnostics** — shows which email transport is active (per-tenant SMTP → system relay → bridge → stub) and lets you send a test email with immediate feedback.
 - **Outbox** — every outbound email/webhook with status, retries and dead-letter queue; failed items can be re-queued.
 - **Digests** — Monday cohort digest and streak-leaderboard digest to staff; learners receive reminders, celebrations and streak nudges automatically.
-

15. Integrations

- **API Tokens** — mint scoped, org-bound tokens for external systems to read your catalog via the public API. Tokens can be revoked or deleted.
- **Webhooks** — register outgoing webhooks (HMAC-signed) for events such as enrolment completed, certificate issued/revoked, AI budget threshold. **Webhook Deliveries** shows every delivery attempt with retries.

- **ERP360** — optional per-organization SSO and billing integration, configured under **Settings** → **Integrations** (super admin).

16. Settings & Compliance

- **Security** — change password, enable TOTP two-factor authentication (with recovery codes).
- **Terms & Conditions** — publish versioned T&Cs; learners must accept the current version before continuing (acceptance ledger records IP and user agent).
- **Kiosk mode** — for shared/front-desk devices: idle lock with PIN or password unlock.
- **Feature flags** — enable/disable individual platform features (AI authoring, marketplace, live sessions, affiliate program, etc.) per organization.
- **Preferences** — personal notification and digest opt-outs.
- **GDPR** — learners can request data export and erasure; erasure soft-deletes and anonymises while preserving certificate integrity.

17. Quick Troubleshooting

Symptom	Check
Invite email never arrived	Email Diagnostics → transport status; copy the invite link manually
Learner can't see a course	Course status is PUBLISHED? Entitlements Inspector for that learner
Certificate shows invalid	Was it revoked? Check the revocation history drawer
Webhook not received	Webhook Deliveries → attempt log; verify the receiver returns 2xx quickly
AI builder fails	Organization AI budget exhausted, or platform AI key balance empty
